AMENDMENTS TO THE CLAIMS

The following listing of claims replaces all prior versions of claims in the application.

1. (Currently Amended) A device diagnosis system, comprising:

a database server for acquiring and centrally managing diagnostic data on a plurality of devices to which different types of diagnostic software are applied and for storing diagnosis results generated by said diagnostic software; and

a client, connected to said database server by a network, comprising:

a diagnosis execution unit for executing said diagnostic software according to said diagnostic data; and

a human-machine interface for communicating with said database server and said diagnosis execution unit,

wherein said database server does not include another diagnosis execution unit.

2. (Original) The device diagnosis system of claim 1, wherein a common interface is provided for the programs of said diagnostic software in said diagnosis execution unit.

3. (Previously Presented) The device diagnosis system of claim 1 or 2, wherein the storing of diagnosis results is in a work area formed within said database server.

4. (Previously Presented) The device diagnosis system of claim 1 or 2, wherein said database server acquires diagnostic data from devices under diagnosis through an external tool and by means of direct input by a user.

5. (Previously Presented) The device diagnosis system of claim 1 or 2, wherein said human-machine interface comprises diagnostic navigators for monitoring said diagnostic software and a diagnostic tool started from any of said diagnostic navigators to provide screens necessary for diagnosis.

6. (Previously Presented) The device diagnosis system of claim 5,

wherein said diagnostic tool comprises a diagnosis control unit for providing setup screens specific to respective types of said diagnostic software and a common control unit for providing screens common to all types of said diagnostic software.

7. (Previously Presented)   The device diagnosis system of claim 1 or 2, wherein said diagnosis execution unit is connected to an external network.
